

Assignment-14.3

Name:K.Pranathi

HTNO:2303A51615

Batch:20

Task 1: AI-Assisted Personal Portfolio Website

Prompt:

Generate a complete personal portfolio website using HTML, CSS, and JavaScript in a single file (or separate files if better).

Requirements:

1. HTML (Structure):

- Use semantic HTML5 tags (header, nav, section, main, footer)
- Sections required:
 - Home (hero with name, title, intro, and button)
 - About (short bio + skills list)
 - Projects (at least 3 project cards with title, description, and link/button)
 - Contact (form with name, email, message)
- Include a responsive navigation bar with links to each section

2. CSS (Design & Responsiveness):

- Use modern CSS (Flexbox and Grid)
- Create a clean, professional UI
- Add a color theme (soft gradient or modern palette)
- Make it fully responsive (mobile, tablet, desktop)
- Add spacing, shadows, and rounded corners
- Include hover effects on:
 - Buttons
 - Project cards (scale + shadow + smooth transition)
- Add a sticky navbar
- Use smooth scrolling behavior

3. JavaScript (Interactivity):

- Enable smooth scrolling for navbar links

- Highlight active section in navbar while scrolling
- Add a mobile menu toggle (hamburger menu)
- Add simple animation when sections appear on scroll (fade-in effect)

4. Additional Features:

- Clean and readable code with comments
- Use class-based styling
- Ensure accessibility (labels, alt text)
- Keep everything <beginner-friendly

Code:

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <meta name="viewport" content="width=device-width, initial-scale=1.0">

```

Explanation: This project is a personal portfolio website built using HTML, CSS, and JavaScript with sections like Home, About, Projects, and Contact. It uses a responsive design with Flexbox, smooth navigation, and interactive project cards with hover effects. The website has clean styling and includes a footer with the name *Manu Sree (CSE Student)*.

Task:2

Prompt:

Create a simple and attractive restaurant landing page using HTML, CSS, and JavaScript. Requirements: Add a responsive navigation bar with links: Home, Menu, Gallery, Contact. Design a Menu section using CSS cards to display food items with name, image, and price. Implement a Gallery section with a JavaScript image slider (auto-slide + next/prev buttons). Add smooth animations and transitions (hover effects, fade-in, sliding effects). Ensure the page is responsive for mobile and desktop. Use clean, modern styling with good colors and spacing. give me effective page

Code:

```

Task3:

Prompt: Create a responsive SR University fest registration form with Name, Email, Phone, Department, and Event fields.

Add CSS styling with a background image and clean layout for readability.

Include JavaScript for real-time validation (email format, phone length, required fields).

Code:

```

<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="UTF-8">

    <meta name="viewport" content="width=device-width, initial-scale=1.0">

    <title>Event Registration | 2026</title>

```

```
<link href="https://fonts.googleapis.com/css2?family=Segoe+UI:wght@400;600&display=swap"

</body>

```

</html>

A screenshot of a web form titled "Event Registration" centered on a purple gradient background. The form is white with rounded corners and contains the following fields: "Full Name" with a placeholder "Enter your name", "Email Address" with a placeholder "example@domain.com", "Phone Number (10 Digits)" with a placeholder "9876543210", "Department" with a dropdown menu showing "Select Department", and "Event Selection" with a dropdown menu showing "Select an Event". At the bottom of the form is a purple button labeled "Register Now".

Explanation:

The HTML form collects user details like name, email, phone, department, and event in a simple layout.

CSS adds a background image and styles the form to make it clean, centered, and easy to read.

JavaScript validates inputs (email format, 10-digit phone, required fields) and prevents submission if data is invalid.

Task4:

Create an e-commerce product page with a grid layout using HTML and CSS.

Add JavaScript "Add to Cart" functionality with a cart counter at the top-right.

Include visual feedback when items are added and a background image.

Code:

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>E-Commerce Product Page</title>
```

```
  <style>
```

```
    body {
```

```
font-family: Arial;

margin: 0;

background: url('https://images.unsplash.com/photo-1512436991641-6745cdb1723f') no-repeat center center fixed;

background-size: cover;

}
```

```
/* Cart Counter */
```

```
.cart {

    position: fixed;

    top: 15px;

    right: 20px;

    background: black;

    color: white;

    padding: 10px 15px;

    border-radius: 20px;

    font-size: 18px;

}
```

```
/* Product Grid */
```

```
.container {

    display: grid;

    grid-template-columns: repeat(auto-fit, minmax(200px, 1fr));

    gap: 20px;

    padding: 60px;

}
```

```
/* Product Card */
```

```
.card {

    background: rgba(255,255,255,0.9);

    padding: 20px;

    text-align: center;

    border-radius: 10px;
```

```
    box-shadow: 0 0 10px gray;
}
```

```
button {
    padding: 10px;
    background: green;
    color: white;
    border: none;
    cursor: pointer;
    border-radius: 5px;
}
```

```
button:hover {
    background: darkgreen;
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<!-- Cart Counter -->
```

```
<div class="cart"><img alt="Shopping Cart Icon" data-bbox="245 615 265 630" /> <span id="count">0</span></div>
```

```
<!-- Product Catalog -->
```

```
<div class="container">
```

```
<div class="card">
```

```
<h3>Product 1</h3>
```

```
<p>₹500</p>
```

```
<button onclick="addToCart(this)">Add to Cart</button>
```

```
</div>
```

```
<div class="card">
```

```
<h3>Product 2</h3>

<p>₹700</p>

<button onclick="addToCart(this)">Add to Cart</button>

</div>
```

```
<div class="card">

  <h3>Product 3</h3>

  <p>₹900</p>

  <button onclick="addToCart(this)">Add to Cart</button>

</div>
```

```
<div class="card">

  <h3>Product 4</h3>

  <p>₹1200</p>

  <button onclick="addToCart(this)">Add to Cart</button>

</div>
```

```
</div>
```

```
<script>
```

```
let cartCount = 0;
```

```
function addToCart(btn) {

  // Increase count

  cartCount++;

  document.getElementById("count").innerText = cartCount;

  // Visual feedback

  btn.innerText = "Added ✓";

  btn.style.background = "gray";

  // Reset after 1 second

  setTimeout(() => {
```

```

        btn.innerText = "Add to Cart";

        btn.style.background = "green";

    }, 1000);
}

</script>

</body>

</html>

```

Explanation:

HTML creates a grid-based product catalog with cards and an “Add to Cart” button for each item.

CSS styles the layout, adds a background image, and positions the cart counter at the top-right corner.

JavaScript updates the cart count and gives visual feedback by temporarily changing the button when clicked.

Task5:

Prompt:

Create a responsive web page with header, navigation, main content, and footer using HTML and CSS.

Add responsive design using media queries for desktop, tablet, and mobile.

Include a background image without zoom and keep the layout clean and organized.

Code:

<!DOCTYPE html>

<html>

<head>

<title>Responsive Layout</title>

<style>

```
body {
```

```
margin: 0;
```

font-family: Arial;

```
background: url('https://images.unsplash.com/photo-1492724441997-5dc865305da7') no-repeat center center fixed;
```

```
background-size: 100% 100%; /* no zoom */
```

}

```
header {
```

```
background: black;
```

```
color: white;
```

padding: 15px;

```
text-align: center;
```

}

```
nav a {
```

```
color: white;
```

```
margin: 10px;
```

```
text-decoration: none;
```

}

```
.main {
```

```
display: flex;
```

padding: 20px;

}

```
.content {  
    flex: 3;  
    background: rgba(255,255,255,0.9);  
    padding: 20px;  
    margin-right: 10px;  
}
```

```
.sidebar {  
    flex: 1;  
    background: rgba(200,200,200,0.9);

</footer>

</body>
</html>
```

Explanation:

The HTML structure includes a **header with navigation links**, a **main section (content + sidebar)**, and a **footer** for basic page layout.

CSS is used to **style the layout**, add a **background image without zoom**, and organize sections using Flexbox for a clean design.

Media queries make the page **responsive**, so it adjusts layout properly for desktop, tablet, and mobile screens.
